The goal of this programmers [guide is to walk through the steps required to understand the SdmxSource framework, with the end result being a Java Web application which hosts an SDMX Web Service on top of a Database The guide will then demonstrate how the above information can be

C for Java Programmers

the java runtime system detects pieces of Java code that are executed frequently and compiles them into the real instruction set of the host computer (native code) This is faster than interpreted bytecode, but usually not quite as fast a native code Finally, note that the Java compiler, javac, is itself a Java program, written in Java!
